People of the African diaspora have always been a spiritual people. However initially, meaning the first time the spirituality was based on **natural order, universal law, divine law** —all of which is **nature**.

After Europeans arrived upon the African continent the spirituality was transferred to something else.

That something else is known as a **belief system**. And there exist fundamental problems with belief.

Because a belief is not a 100% conviction. Beliefs carry a degree of doubt which leaves the belief system vulnerable to misinterpretations, manipulations and perversions. This corruption can not happen with universal law because the ominous creator controls the order of nature ...Not scripture, not mankind!

I hope this resource helps you find solutions for manifesting what you desire for your life. Remember, African Sacred

*Science 'is not a religion'. It's a **practice** based on how our universe works. A practice based on your alignment with nature.*
